DETAILED ACTION

Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 23, 2010 has been entered.
- 2. The previous claim objections and 112, 1st Paragraph rejection has been withdrawn in light of applicant's amendments made August 13, 2010.
- 3. Claims 1-8, 16-17 and 19-23 are pending.

Claim Rejections - 35 USC § 112

- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 5. Claim 23 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 23, the recitation "wherein the composition comprises electrolyte concentrates exclusively" renders the claim indefinite because it is not clear if the composition consists of electrolyte concentrates or if the electrolytes in the composition can only be in the form of a concentrate.

Application/Control Number: 10/576,813 Page 3

Art Unit: 1781

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 9. Claim 1-8, 16 and 19-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frankel ("Supplementation of Trace Elements in Parenteral Nutrition: Rationale and Recommendations").

Art Unit: 1781

Regarding claims 1 and 4, Frankel discloses a total parenteral nutrition composition supplemented with trace elements including *a minimum provision* of 50 meg/day (i.e. 0.05 mg/day) of selenium and 10 mg/day of zinc (p. 587/ paragraph 4, p. 588/paragraph 6). Frankel discloses that the parental administration of iron is problematic and does not indicate supplementation of iron in total parenteral nutrition compositions (p.583/paragraph 3, p. 589/paragraphs 4-5).

Given Frankel discloses total parenteral nutrition composition supplemented with selenium and zinc in quantities that overlap with those presently claimed, it would have been obvious to one of ordinary skill in the art at the time of invention to have selected the overlapping portion of the ranges disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness. *In re Malagari*, 182 USPQ 549.

Regarding claims 2-3 and 5, Frankel discloses all of the claim limitations as set forth above. Given Frankel discloses a parenteral composition, it is clear that the composition is inherently an infusion solution that exists as an aqueous solution and is suitable for parenteral administration.

Regarding claim 6, Frankel discloses all of the claim limitations as set forth above. Frankel also discloses total parenteral nutrition compositions comprising chromium and copper (p. 583/paragraphs 3-5, p. 584/paragraphs 1-9, p.585/paragraphs 1-4).

Regarding claims 7-8, Frankel disclose all of the claim limitations as set forth above. While Frankel disclose a total parenteral nutrition composition containing selenium and zinc, the reference does not explicitly disclose that composition is formulated as a 10 ml infusion solution that exists as an aqueous solution in an ampoule.

Art Unit: 1781

It is well known to package parenteral compositions in parenteral containers, including an ampoule, vial or bag. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have packaged the total parenteral nutrition composition of Frankel in any parenteral container, including an ampoule, and arrived at the current invention.

Further, it would have been obvious to one of ordinary skill in the art to have formulated the total parenteral nutrition composition in any size of dose, including 10-ml, because change in size is not patently distinct over the prior art absent persuasive evidence that the particular configuration of the claimed invention is significant. See *In re Rose*, 220 F.2d 459, 105 USPQ 237 (CCPA 1955); *In re Rinehart*, 531 F.2d 1048, 189 USPQ 143 (CCPA 1976); *In re Dailey*, 357 F.2d 669, 149 USPQ 47 (CCPA 1966). MPEP 2144.04[R-1].

Regarding claims 16 and 19, Frankel discloses administering a total parenteral nutrition composition supplemented with a *minimum provision* of 50 meg/day (i.e. 0.05 mg/day) of selenium and 10 mg/day of zinc to a human (p. 587/ paragraph 4, p. 588/paragraph 6). Frankel discloses that the parental administration of iron is problematic and does not indicate supplementation of iron in total parenteral nutrition compositions (p.583/paragraph 3, p. 589/paragraphs 4-5).

Regarding claim 20, Frankel discloses all of the claim limitations as set forth above. Frankel also discloses administering a total parenteral nutrition composition further comprising chromium and/or copper (p. 583/paragraphs 3-5, p. 584/paragraphs 1-9, p.585/paragraphs 1-4).

Regarding claims 21-22, Frankel discloses all of the claim limitations as set forth above. Further, Frankel discloses that in some cases selenium supplemented compositions have been

administered daily for 3-4 months (p.587/paragraph 5). Frankel also discloses that zinc supplemented compositions have been administered daily for 92 months (p.588/paragraph 6).

Regarding claim 23, Frankel discloses all of the claim limitations as set forth above. Given Frankel disclose a supplement comprising chromium, copper, manganese, selenium and zinc, it is clear that the composition would intrinsically comprise electrolyte concentrates.

10. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Frankel ("Supplementation of Trace Elements in Parenteral Nutrition: Rationale and Recommendations") in view of Ballevre et al. (US 2003/0161863).

Regarding claim 17, Frankel discloses all of the claim limitations as set forth above. While Frankel disclose administering a total parenteral nutrition composition comprising selenium and zinc to a human, the reference does not explicitly disclose that the human is an intensive care patient or a sepsis patient.

Ballevre et al. teach an enteral nutrition composition comprising about 40 to about 100 µg/dose of selenium and 5 to 10 mg/dose of zinc (Abstract, [0029]-[0030]) that is administered to critically ill patients including those with sepsis ([0005], [0011]). Further, Ballevre et al. discloses an enteral nutrition composition that does not comprise iron (*see* Example 1-[0048]-[0050]).

Given that Ballevre et al. teach that is was known to administer nutritional compositions comprising selenium and zinc to critically ill patients including those with sepsis, since Ballevre et al. teach a composition substantially similar l to that of Frankel and that presently claimed, it

would have been obvious to one of ordinary skill in the art to have administered the total parenteral nutrition composition of Frankel to critically ill patients including those with sepsis.

Response to Arguments

11. Applicant's arguments filed August 13, 2010 have been fully considered but they are not persuasive.

While Frankel discloses compositions comprising a minimum provision of 50 meg/day (i.e. 0.05 mg/day) of selenium and 10 mg/day of zinc, Applicants submit that Frankel does not disclose that claimed ranges with sufficient specificity to lead one of ordinary skill in the art to choose the claimed selenium or zinc concentrations.

Note, Frankel discloses composition with a minimum of 0.05 mg/day selenium and even recommends, in cases of depletion, administering doses comprising 0.250 mg/day.

Applicants explain that they have previously demonstrated that the claimed invention involves surprising and unexpected results (*see* Rule 132 Declaration of D. Thomas Stifel dated December 28, 2009). Applicants find that they have clearly demonstrated "the compositions comprising high doses of selenium and zinc which are encompassed by the claims (i.e. selenium doses that are ten-fold higher than those discloses in the prior art), are associated with a low risk of chronic inflammation, infections or diseases associated with free-radical production, as compared to low-dose compositions.

Applicants submit that the results described in the previously submitted Rule 132 declaration are reasonably commensurate in scope with the rejected claims. Applicants also submit that the comparison drug described in the declaration (i.e. Tracutil®) comprises a daily

Art Unit: 1781

dose of 20 mg selenium and 3.27 mg zinc which is reasonably commensurate in scope with the closes prior art.

It is agreed that the results previously submitted are reasonably commensurate in scope with the rejected claims. However, Applicants have not shown that comparison samples in said examples fairly represent the closest prior art. It is well established that the evidence of unobviousness must be commensurate in scope with the claimed subject matter. See *In re Kerkhoven*, 626 F.2d 846, 851, 205 USPQ 1069, 1072-73 (CCPA 1980) and *In re Clemens*, 622 F.2d 1029, 1035, 206 USPQ 289, 896 (CCPA 1980). First the drug described in the declaration (i.e. Tracutil®) comprises 20 μg selenium and not 20 mg. A dose of 20 μg selenium, i.e. 0.002 mg, is over 10 times smaller than the minimum dose recommended by Frankel, i.e. 0.05 mg/day. Further, Frankel discloses a zinc dosage of 10 mg while Tracutil® comprises only 3.27 mg zinc. Clearly, the comparison drug described in the declaration (i.e. Tracutil®) *does not* represent the closest prior art.

In addition, while applicant has established that normal levels of selenium were achieved in the blood and serum of patients after administration of a composition comprising more selenium than a composition which did not produce normal levels of selenium, a person of ordinary skill in the art would not find these results unexpected. One of ordinary skill in the art would expect that the greater the dose the faster normal levels of selenium in the blood and serum would be achieved.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ELIZABETH GWARTNEY whose telephone number is (571)270-3874. The examiner can normally be reached on M-F.

Application/Control Number: 10/576,813 Page 9

Art Unit: 1781

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Keith Hendricks can be reached on (571) 272-1401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
